in Fall Detection

Advanced
Vibration-Sensing
Technology

Nighttime
Safety Light

No Cameras or
Microphones

HOW IT WORKS

The Beacon fall detection nightlight identifies unique vibration patterns on the floor caused by falls. Once a fall is detected, it instantly alerts caregivers.

The Beacon operates effectively on various indoor floor types and adapts to noisy environments. Unlike other solutions, it preserves privacy by eliminating the need for wearables, cameras, or microphones.

It also functions as an artfully-designed, soothing nightlight that blends seamlessly into the environment and helps reduce the risk of falls at night without disrupting sleep.

CANCEL BUTTON

Cancel the alarm at a press of a button.

LIGHTING

The light will blink red when a fall is detected.

ALERT

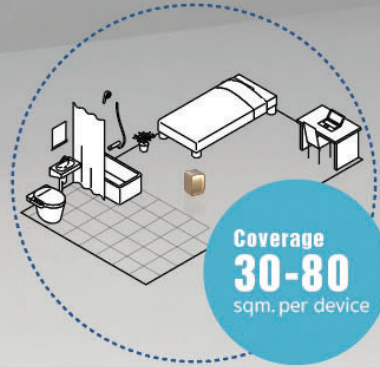

Real-time alerts sent through Wi-Fi or SIM card.

DETECT FALLS

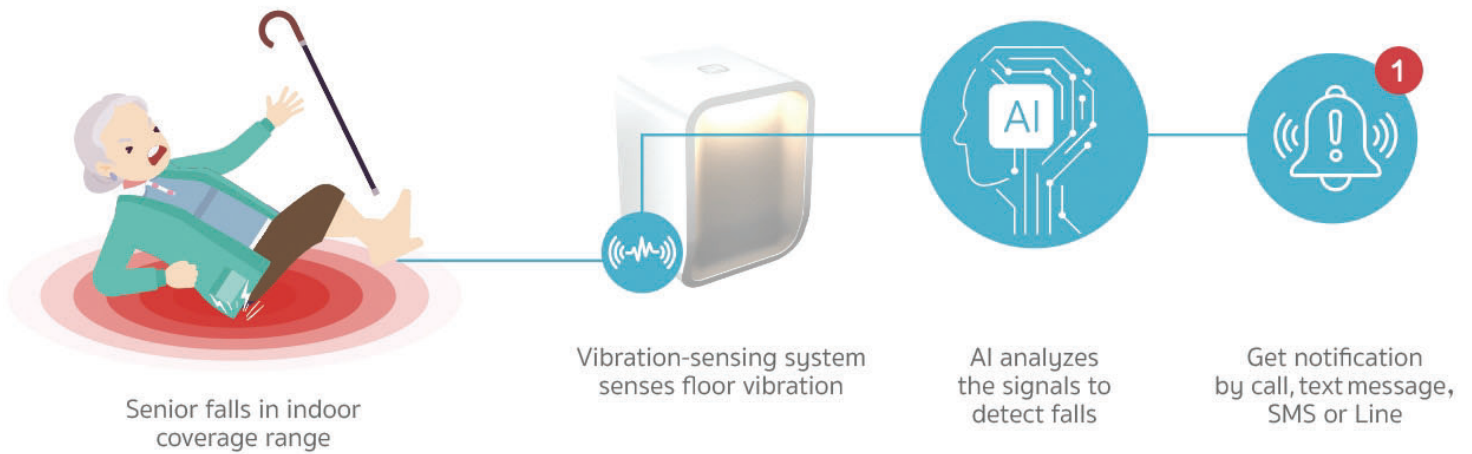

High-precision AI analyzing every impact event to detect falls.
